Sequence 7027, Application US/10956157
Sequence 7027, Application US/10956157
Publication No. US20050118625A1
GENERAL INFORMATION:
APPLICANT: Wyeth
APPLICANT: Wounts, William
TITLE OF INVENTION: NUCLEIC ACID ARRAYS FOR DETECTING GENE EXPRESSION ASSOCIATED WITH
TITLE OF INVENTION: HUMAN OSTEOARTHRITIS AND HUMAN PROTEASES
FILE REFERENCE: 031896-043000 (AM 101081)
CURRENT APPLICATION NUMBER: US/10/956,157
CURRENT FILING DATE: 2004-10-04
NUMBER OF SEQ ID NOS: 319805
SOFTWARE: Patentin version 3.2
SEQ ID NO 7027
LENGTH: 1036
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 734

for New nucleic acids encoding apoptin-associating proteins useful inducing apoptosis, particularly p53 independent apoptosis, or treating cancers or autoimmune diseases.

Claim 6; Fig 2; 50pp; English.

The present sequence encodes a human apoptin-associating protein 1 (AAPI). The protein is capable of providing apoptosis. AAP polypeptides and polynucleotides are useful for inducing apoptosis, particularly when apoptosis is p53-independent. They may be used to produce pharmaceutical compositions which are used for treating a disease where enhanced cell proliferation or decreased cell death is observed, particularly in cancer or in autoimmune diseases, for diagnosing a disease related with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          substance (apoptin-associating protein 1 (AAP-1)), which is capable of inducing apoptosis. AAP-1 polypeptides and polynucleotides are useful for inducing a p53-independent apoptosis. They are used for treating a fisease where enhanced proliferation or decreased cell death is observed e.g. cancer or autoimmune disease. They are also used for diagnosis of diseases related with aberrations in the apoptotic process such as cancer and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated or recombinant apoptin-associating proteinaceous substance, apoptin-associating protein 1, useful for inducing apoptosis for treating cancer or autoimmune diseases caused by aberrant apoptosis.

The invention provides isolated or recombinant nucleic acid (I), its functional encoding an apoptin-associating proteinaceous (AAP) substance capable of apoptosis. (I), the vector comprising (I), the host cell comprising the vector and the proteinaceous substance encoded by (I) are useful for inducing apoptosis, particularly p53-independent apoptosis, and for treating a disease where enhanced cell proliferation or decreased cell death is observed, such as cancer or an autoimmune disease. A composition comprising the nucleic acid or the AAP may further be used for diagnosing a disease related with aberrancies in the apoptotic process, and for detecting the presence of cancer cells or cells that are prone to cancer. The present sequence represents the nucleotide sequence

AAS52410-Z52474 are human transcriptional regulator molecule (HTRM)

nucleotide sequences. The HTRM protein and nucleotide sequences are

nucleotide sequences. The HTRM protein and nucleotide sequences are

captured in the preventing or treating disorders associated with decreased

expression or activity of HTRM which include cell proliferative disorders

and leuksemia; immune disorders such as AIDS, Addison's disease, diabetes

and leuksemia; immune disorders such as AIDS, Addison's disease, diabetes

mellitus, rheumatoid arthritis, multiple sclerosis, systemic lupus

erythematosus, and myasthenia gravis; infections and trauma. Antagonists

of the HTRM polypeptides are useful for treating or preventing disorders

associated with increased expression or activity of HTRMs. HTRM

polypeptides, their immunogenic fragments or oligopeptides are useful for

corcenting libraries of compounds in drug screening techniques.

polymucleotides encoding HTRM are useful for blocking the activity of HTRM.

Command associated with decreased HTRM expression. Antibodies which

specifically bind HTRM and polymucleotides encoding HTRM are useful for

disorder associated with decreased HTRM expression of HTRM, particularly

in assays that detect the expression of HTRM. Nucleotide sequences

encoding HTRM may be useful to generate hybridization probes sequence

mapping the naturally occurring genomic sequence and to detect and HTRM; human transcriptional regulatory molecule; arteriosclerosis; AIDS; arteriosclerosis; cirrhosis; cancer; leukaemia; diabetes mellitus; 88; Addison's disease; multiple sclerosis; rheumatoid arthritis; infection; trauma; myasthenia gravis; adenocarcinoma; immune disorder; treatment. 1021 TTTTATGTATTCCATTGTTTTATATGATTTTCCTAACAATCATTTATAATTGGATGTGCT treatment of cancer CCTGAATCTACTTTTTATAAAAGGCCTTCGTGGCCTCGAGAGATCTATGA 1131 Tang YT; Lu DAM; Y, peptides useful for diagnosis, prevention and , Reddy R, Azimzai Y,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an inhibitory RNA (RNA1) molecule derived from a nucleic acid molecule comprising a defined nucleic acid sequences given in the specification or a sequence which hybridizes to the sequences and encodes a Notch signaling target gene or which is a degenerate as a result of the genetic code of the sequences. The methods and compositions of the present invention are useful for manipulating the phenotype of stem cells, preferably pluripotent stem cells. This sequence corresponds to one of the nucleic acid molecules of the invention.
